

Custom Home Building Process

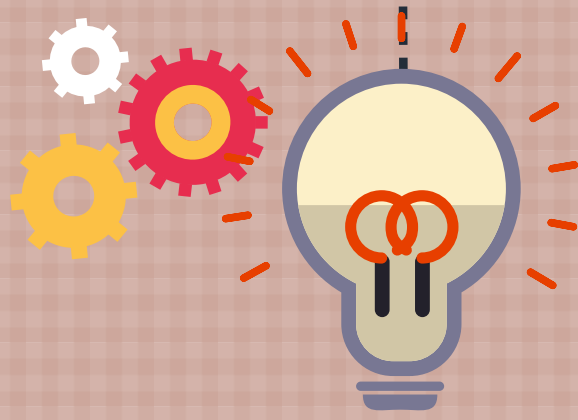

The custom home building process consists of various important steps, each of which are required to happen in a well-planned sequence.

01

Idea Inception

You can gather ideas for your custom home and determine the financial feasibility of your project by putting a budget together.

Contact A Custom Home Builder

02

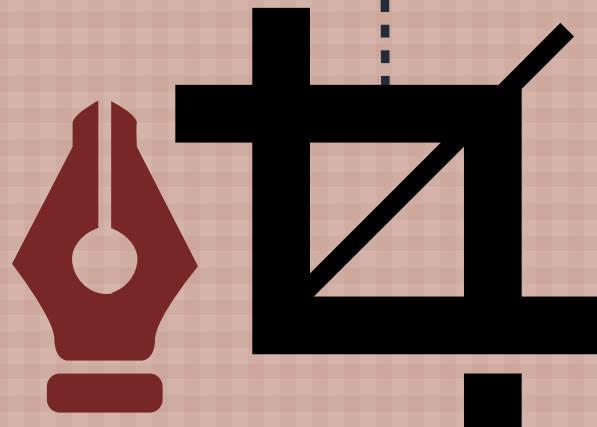

The team includes architects, builders & interior designers, who will work with you to fine tune your concept.

03

Design

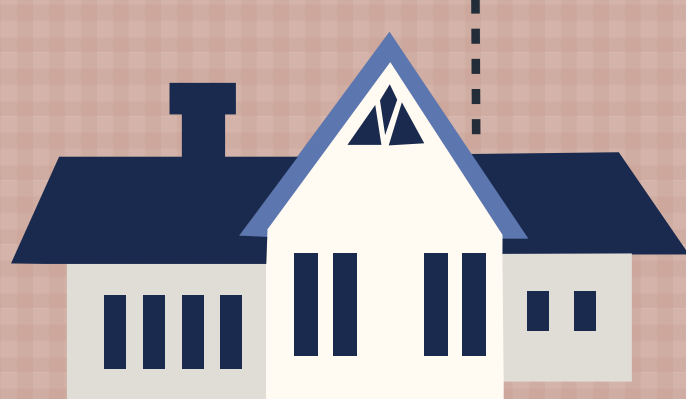

Discuss the details of architectural design with your custom home builder. They will create unique home designs according to your needs.

Construction

04

Depending upon the agreed-upon schedule with your builder, the construction process will depend upon your decisions and selections.

05

Occupancy

The builder will do a final walk-through and make the final touches to the design. This will ensure a stress-free move-in process.
